Team Sports Coaching Solution

Connect your team. Gain an edge.

It's critical in any sport for coaches and athletes to constantly share playbooks, data and film. From new plays to game performances, sharing this type of information as a group is critical for teams to gain an edge.

Yet, being in constant transition on trains, planes and buses makes it difficult for teams to quickly share and get on the same page. Having access to TVs or video projectors on the road or finding available AV equipment can be a challenge.

But what if you could easily present, collaborate and share media on the road, in a hotel or sideline with the entire team—directly to the devices they carry—without cables, dongles or the internet? With Forum, you can.

ENHANCE YOUR COACHING—ANYWHERE.

Forum is a presentation solution that allows you to present in-person directly to anyone's phone, tablet or laptop. It's for sharing playbooks, data and video whenever and wherever without purchasing any additional AV gear. All you need is a laptop, the players mobile devices and Forum, and you can have a meeting anywhere.

With Forum, every teammate can see what you're presenting so that you can share your latest winning strategies.

TURN YOUR LAPTOP INTO A CONNECTED, TEAM-MEETING HUB.

Forum software turns your laptop into a multi-person presentation tool that connects multiple Wi-Fi enabled devices. An optional Wi-Fi router helps expand the range and number of connected participants.

MAKE YOUR OWN NETWORK. NO INTERNET REQUIRED.

Planes, buses, dugouts or sidelines—wherever teams need to meet and get on the same page, Forum can connect them all. Forum works on any network, but can also create its own independent network, so the internet isn't needed to connect devices.

MADE FOR ALL SPORTS

By using the most common technologies—Wi-Fi and a browser—the personal devices athletes carry every day become a personal window to plays and planning for football, soccer, baseball, basketball, hockey and more.

Engage with impact.

Forum has unique team-engagement features that create more impactful and interactive meetings.

- **Screen Sharing**

Perfect for sharing in-game or training videos, websites or other types of media, Forum's screen-share feature displays exactly what's on the presenter's screen to everyone in the meeting.

- **File Sharing**

Any additional files of any type can be made available and downloaded by your team during a Forum meeting. Athletes can capture the plays or demos by downloading instantly—allowing them to revisit the training as much as they want.

- **Discreet Q & A**

During a Forum presentation, audiences can discreetly and directly ask coaches questions without interruption through the interface to be answered on the spot or later.

- **Team Polls**

Easily make strategy decisions with input from your team by using Forum's polling feature at any point during the presentation. Discover trends over time using the meeting data from all your polls.

YOUR PLAYS, STAY YOURS.

Forum meetings are secure, private meetings. Since Forum creates a local independent network either from your laptop or through a travel Wi-Fi router, it makes it separate from the internet. Only the people you invite to the meeting have access to your presentation or specified files. And once you close the network, it's gone.
